

# TOP 7 BENEFITS OF OUTSOURCING YOUR MANAGED SOC

## THE NEED TO KNOWS

### What is a SOC?

A Security Operations Centre alleviates the worry of cyber security through utilising a team of cyber professionals responsible for monitoring and managing the entirety of an organisation's cyber security posture.

An effective SOC utilises a range of cutting-edge technologies and tools to analyse, detect and mitigate any potential digital threats, allowing business leaders to focus on running their business.

### A Microsoft SIEM solution

In order to mitigate and manage risks, Stripe OLT utilise a bespoke Microsoft SIEM solution, predominantly using the capabilities of Microsoft's Azure Sentinel.

Within Azure, our SOC team automatically log, compare and analyse all security events that could pose a risk to your network and business systems.

## ADVANTAGES OF AN OUTSOURCED SOC

The advantage of outsourcing your SOC to a third-party provider is that you place the responsibility for security with an organisation for which cyber security is its speciality and core business focus.

This enables an organisation to take advantage of several advantages:

Strain will be reduced on your in-house IT team, freeing up their time to be more focussed on other elements in the department.

Outsourcing your SOC will be tailored to your business's unique requirements.

Outsourcing your SOC will provide ownership and accountability over the entirety of your security operation.

You will gain access to experienced, trained specialists without the need for recruiting in-house specialists.

You have a dedicated team at your disposal to provide proactive, continuous, 24/7 monitoring.

You can avoid the complexity of implementing and building a SOC yourself.

Your partner will have access to the latest tools and technologies implemented, saving you time and money.

## THE BUILDING BLOCKS OF AN IN-HOUSE SOC

Discover the overall annual cost of building your own in-house SOC team for your business

Your paragraph text

### ANNUAL COSTS
